

Steps To Generate App Password With Two Step Verification

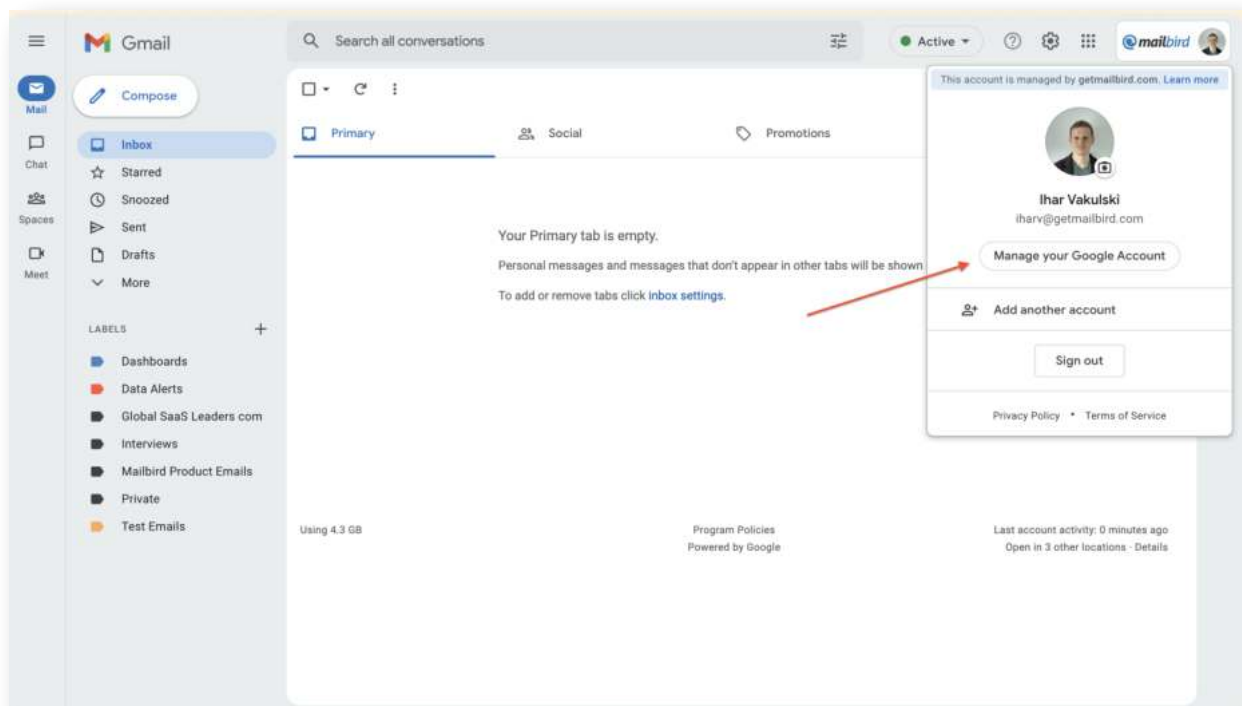

Steps to Generate an App Password in Gmail on the Web

Follow the steps below to create an email password for IMAP or POP in Gmail's web application:

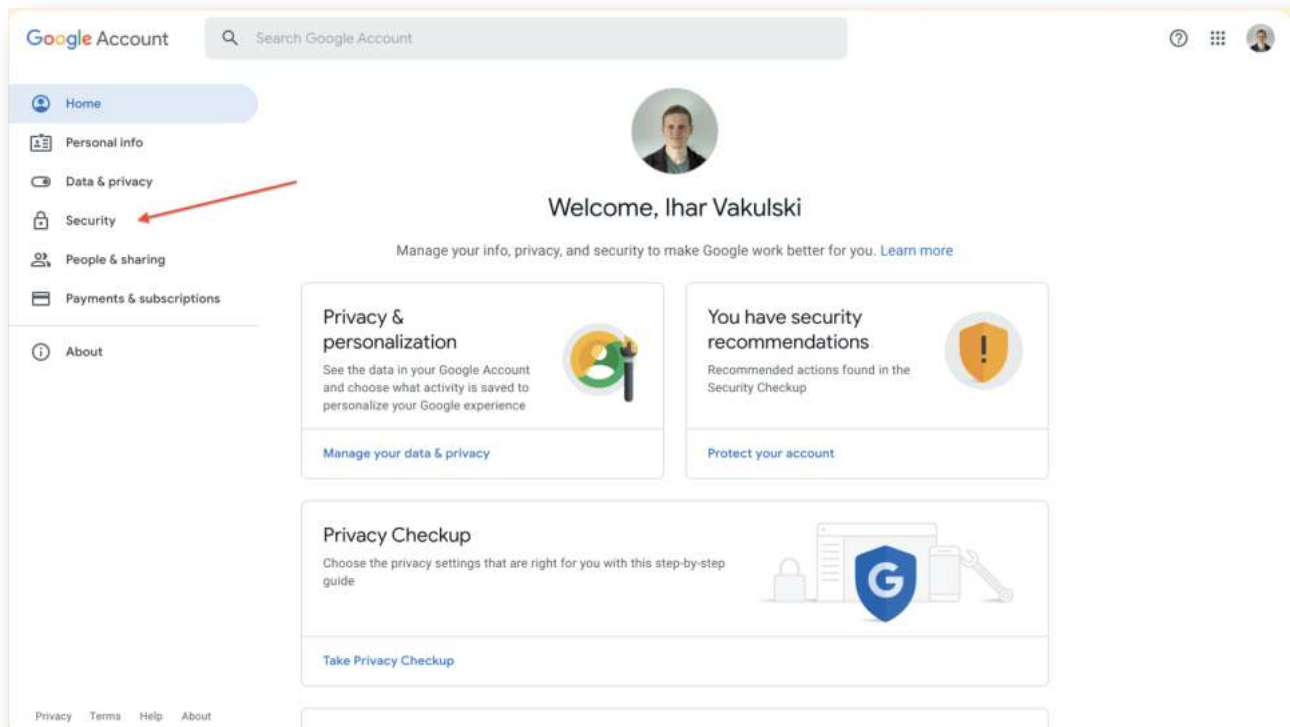

1. Log into your gmail inbox.

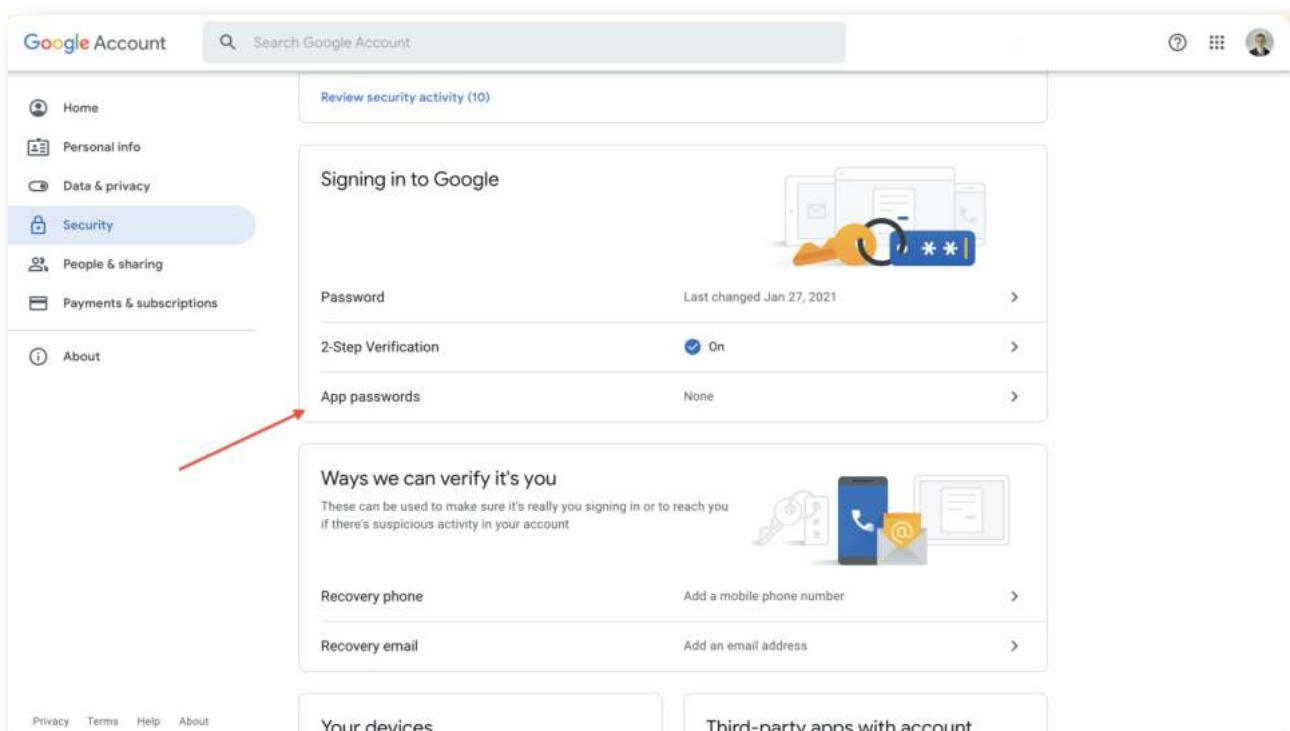

2. Click on your account icon and select the Manage your Google Account link.

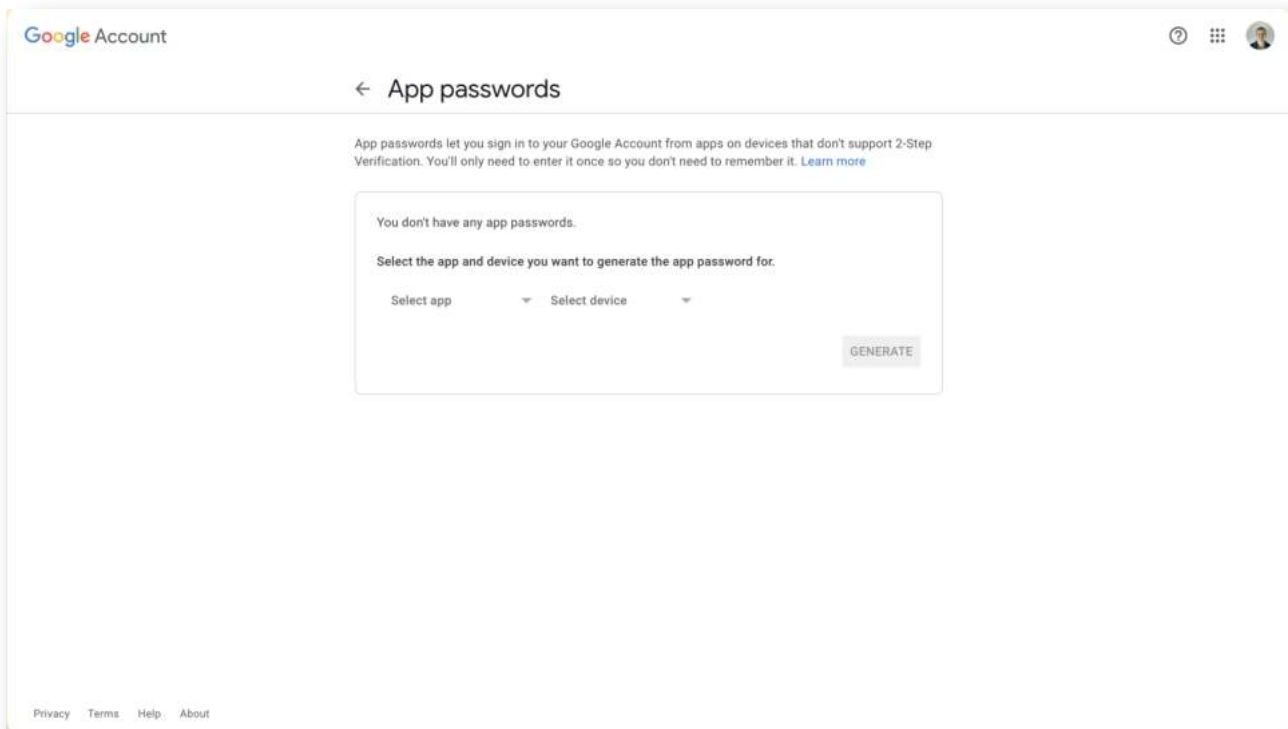

3. You will be redirected to your Google account page. Click on the Security tab in the left-hand side menu.

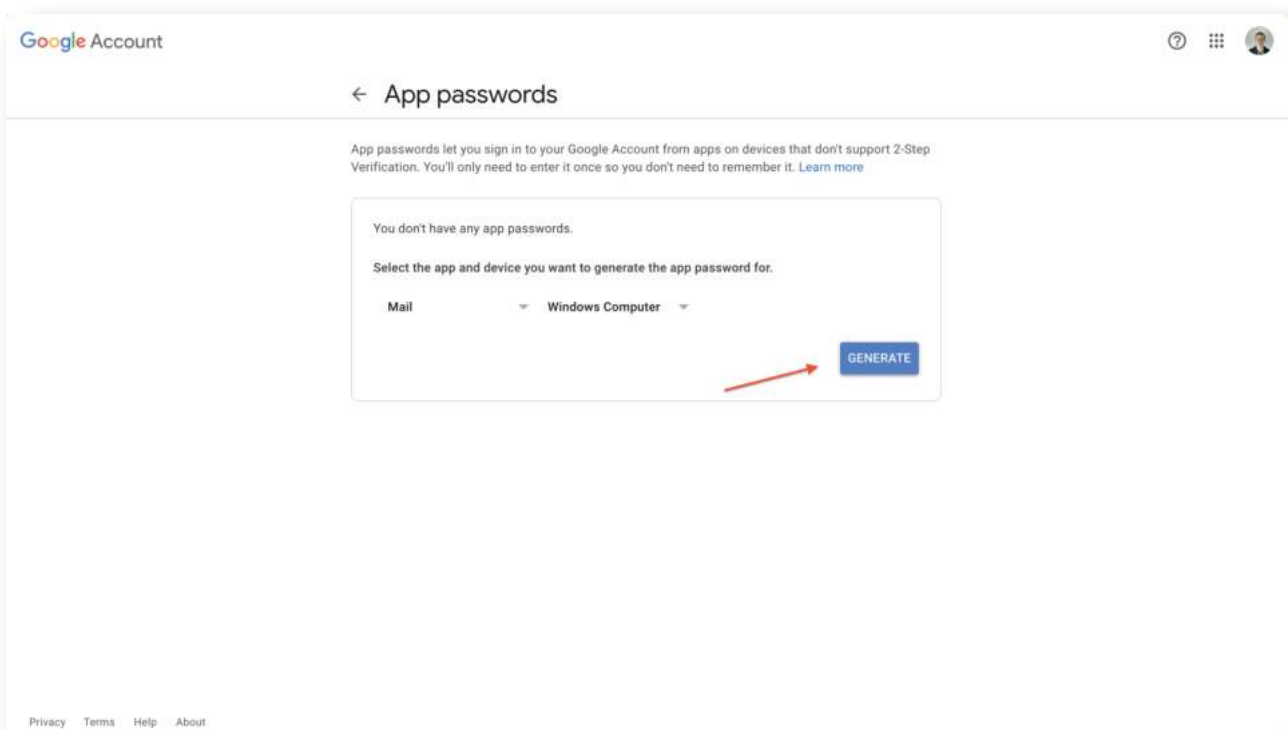

4. Scroll down to the Signing in to Google section and select the App passwords option. If you don't have two-step verification enabled, you should enable it to generate app passwords.

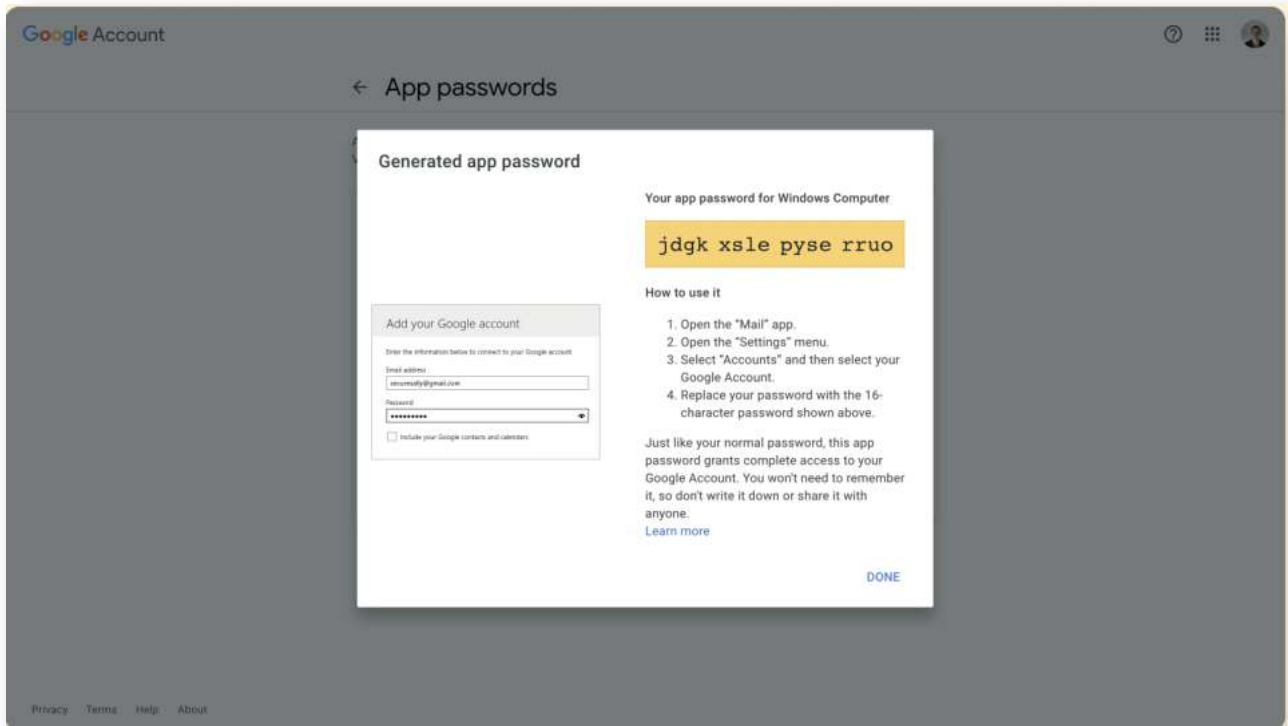

You will be asked to provide your password again, and then you will be redirected to the App passwords page.

5. Under Select app, choose Mail, and under Select device choose Windows computer. If you use another device, please select the most relevant option.
6. Once the app and device are selected, click on the Generate button.

7. Copy the password and paste it into a safe place — for instance, your password manager app, which stores all your passwords, encrypted, online.

Gmail Mobile: Steps to Generate an App Password on iOS or Android

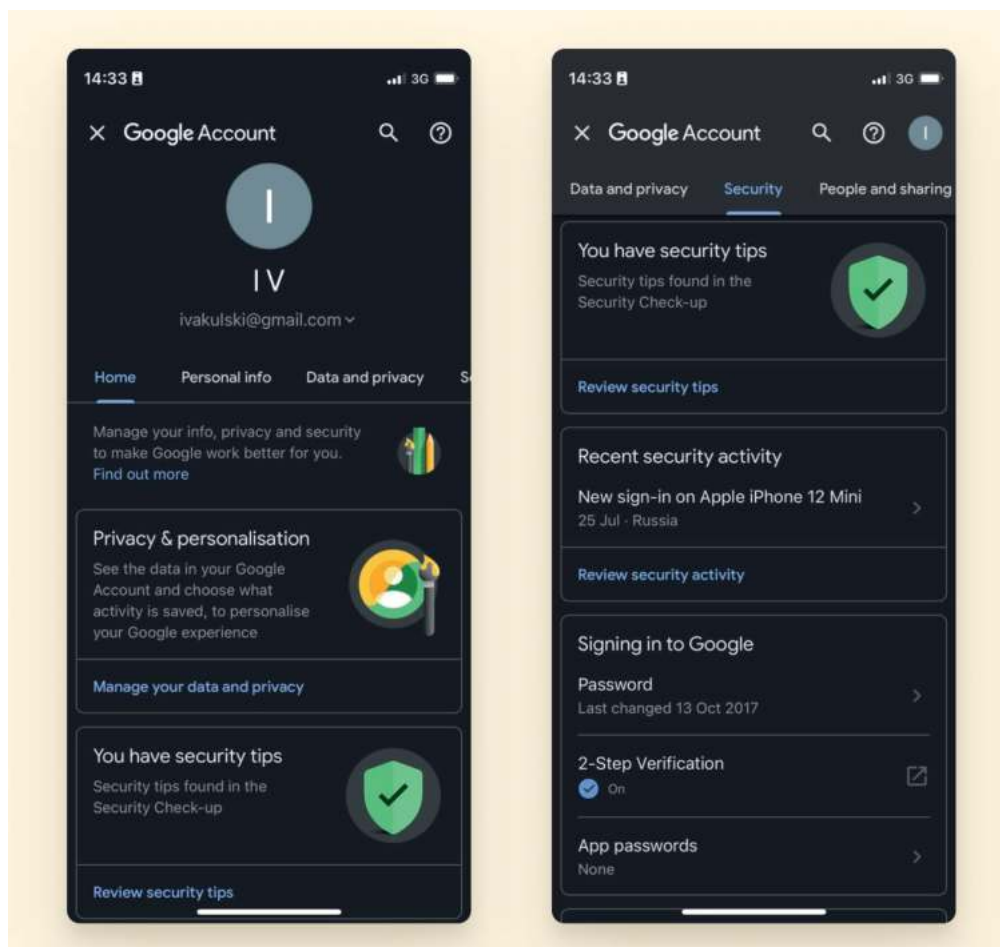

1. To create a new application password using the Gmail app for iOS or Android, log into your account in the app.

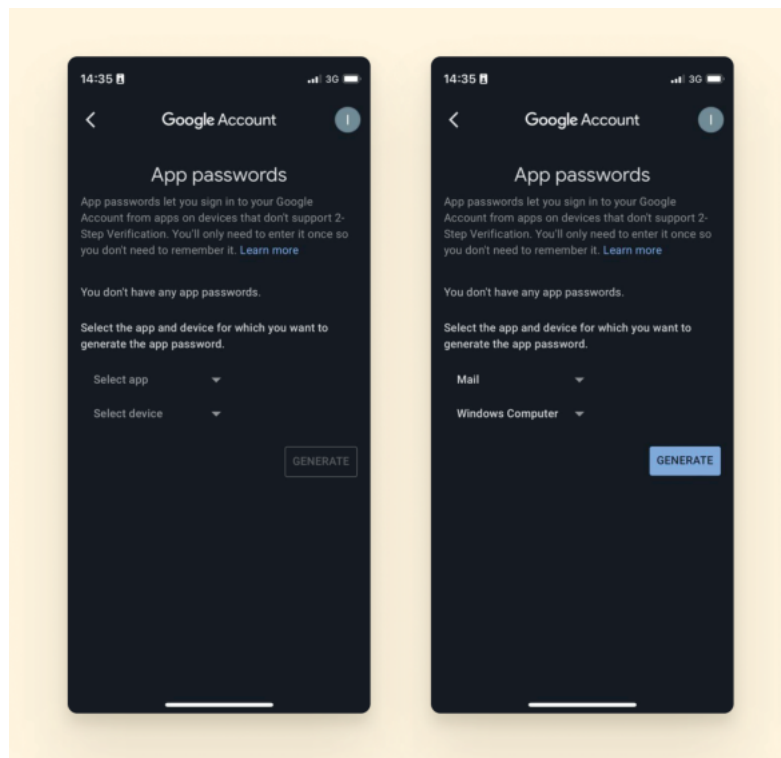

2. In the icon menu, click Manage your Google Account.

3. Once you are redirected to your Google account page, select the Security tab and click on the App passwords link.

4. Choose Mail under Select app and your preferred device under Select device. Next, click the Generate button.

5. You will see a confirmation message with your new app password.
